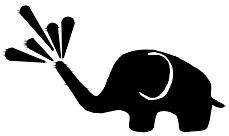
PILLAR FIRE HYDRANT type NH3

<Two in one = hydrant + isolating pre-valve>

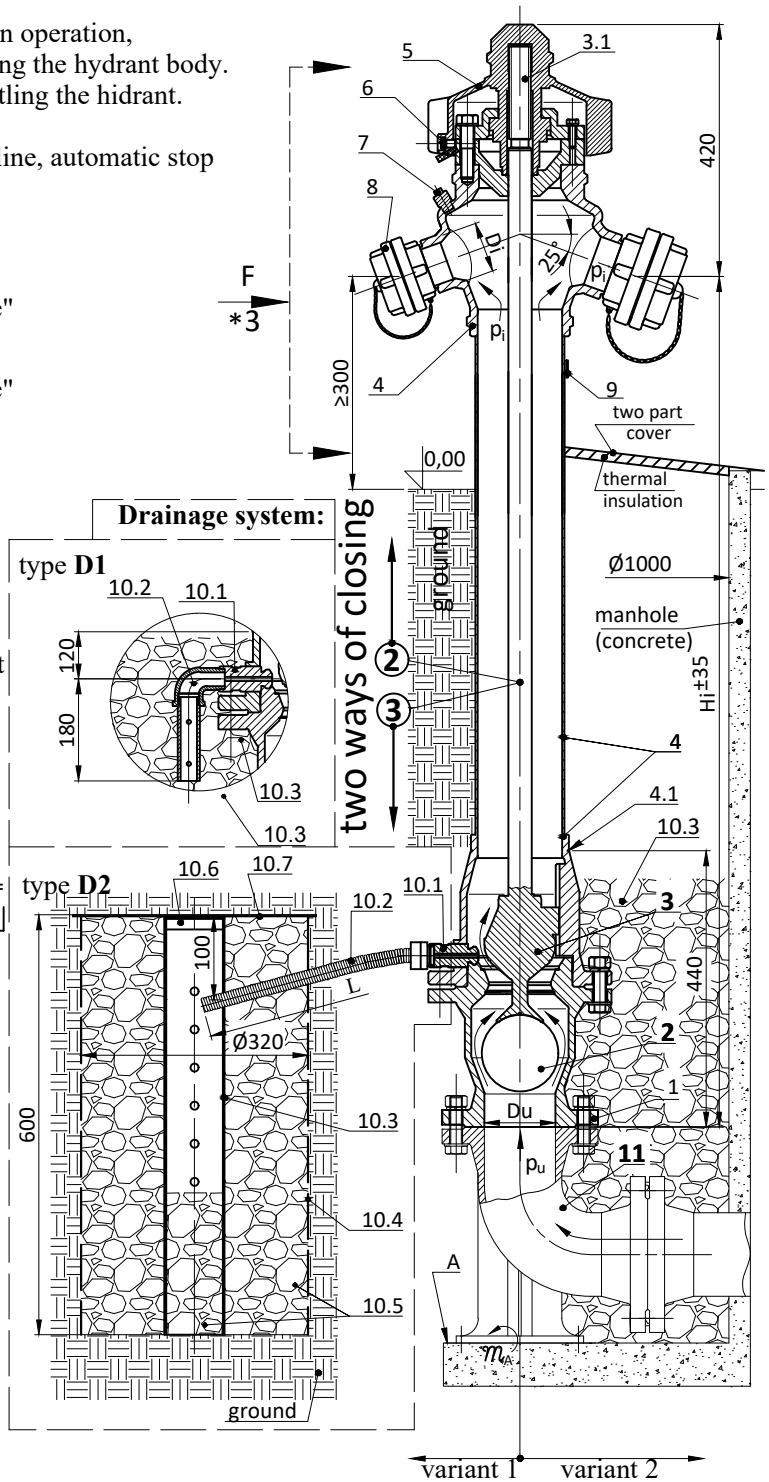
<Double reliability = use even when main valve is defective>

PROCUREMENT DATA:*1 <great flow (Kv= 540 m³/h)=minor fire damage>



Appearance

* Name: Pillar fire hydrant
* Made in accordance with the standard EN14384, type "A".*2 CE
* Nominal sizes DN100, PN16. * Closing with the main valve "form above".
* With isolation "pre-valve", closing "from below". * With control valve.
* Possibility of use even when the main valve seal is defective.
* Activation without additional tools.
* The possibility of blocking unauthorized use.
* Flow (for Di=2x65); Kv=min.520m3/h.
* Activation moment: MOT= max.70Nm.
* Repair of the main valve; the other hydrants remain in operation, without digging up the ground and without dismantling the hydrant body.
* Drainage system "all outside"; repair without dismantling the hidrant.
* Outlets tilted toward the ground for 25°.
* Breakage due to force F; without damage to the pipeline, automatic stop of water discharge. *3
* Breaking moment M= max.14000 Nm.*3
* Inlet connection : Flange EN1092-2 (Du150, PN16) / Particular request, "describe"
* Nominal height Hi: (1350) (1550) (1850) mm / Particular request, "describe"
* Outlets Di: (2x100+1x150) mm
* Outlet couplings: Specify label and standard
* Drainage system: (D1) (D2) / Without
* Medium:Water (technical) (drinking)
* Colors of external surfaces:
  - aboveground part (without pipe): red / special request
  - underground part: black
* **Warranty period: 5 years.**
* Submit documents:
-"Prospect";
-"Test Report", issued by"authorized body";
-"Certificate of Conformity",issued by" "authorized body";
*1 If necessary, "omit/add"
*2 **The standard determines min. performance = "the least good allowed" hydrant.**



*3 installation

Appearance:

1. Inlet flange.
2. Isolation **"pre-valve" (closing from below**).
3. Obturator - **"main valve" (closing from above).**
3.1 The threaded part of the obturator.
4. Body **4.1 Place of breakage**, Due to the impact of force F
5. Cap (keyless activation) 6. Blocking of unauthorized use
7. **Control valve** (**safety**; sealing)
8. Outlet couplings
9. Identification plate ("CE", "K_v", ...)
10. **Drainage system:** (not defined by the standard)

type **D1**:
10.1 Drain valve 10.2 Drain pipe
10.3 Stone (16÷31)mm*4

type **D2**:
10.1 Drainage valve 10.2 Drain pipe (L=?) mm
10.3 Distribution pipe 10.4 Wire basket*4
10.5 Stone (16÷31) mm*4
10.6 Cover 10.7 Plastic foil*4
11. Arch with foot EN545*4

***4 Provided by the buyer**

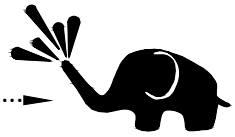
PILLAR FIRE HYDRANT type NH3

<Two in one = hydrant + isolating pre-valve>
<Double reliability = use even when main valve is defective>
<great flow (Kv= 540 m³/h)=minor fire damage>

Basic technical characteristics:

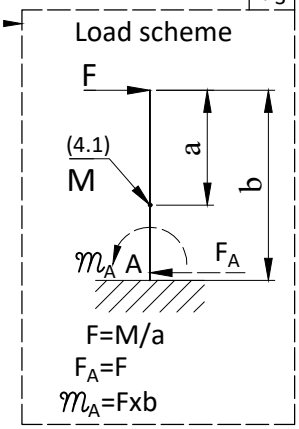
* **Safe = compliant with** the requirements of the standard **EN 14384** = CE
* **Purpose:** Taking water from underground pipelines **for fire fighting and communal needs**
* **See "Procurement data" P1/2**
* **Flow:Kv=540m³/h,** for Di = 2x100 .....



* **Moment of activation MOT: max.60Nm, (Class 1)**
* **Moment of breakage** (at place 4.1) due to force F ..... M≈12500 Nm
* **Foundation** .....
* **Weight** ..... ~ (92÷108) daN for Hi (1350÷1850) mm
* **Materials**:

- hydrant body castings ..... nodular cast
- cap, and output couplings ..... aluminium
- pipe of body, spindle, and obtutator seat ..... stainless steel
- sealants ..... polypropylene/elastomers

*3



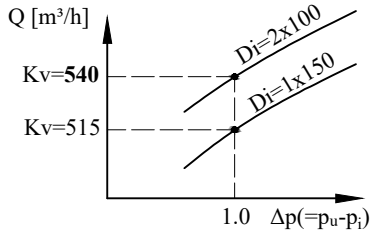
Advantages:

* **Two ways of use = double reliability.**
  - closing with the **main valve (3)**, from above **(regular work)**.
  - closing with a **pre-valve (2)**, from below **(extraordinary work)**.
* Isolation **pre-valve (2) inside the hydrant**, automatic, self-blocking, **which enables**:
  - **that the other hydrants remain in operation even when the main valve (3) malfunction,**
  - **automatic stop of water flow**, in case of breakage (4.1) due to force F,
  - **to omit** a separate isolation **valve in front of the hydrant,**
  - **lower cost** of construction and maintenance of the **hydrant network**,
  - **the use of a hydrant even in the case when the main valve (3) is malfunction.**
* **Large flow: (Kv = 540 m³//h**, for Di = 2 x 100); **less fire damage.**
* **Control valve (7) = great safety of the executor, prevention of hydrant freezing.**
* **Prevented damage to the supply pipeline = breakage at point 4.1**, due to force F.
* **Activation without additional tools**, by turning the cap (5).
* **Easy activation: (class 1, MOT < 60 Nm) longer service life**.
* **Possibility of blocking (6) unauthorized use.**
* **High reliability of closing**: impermeability even after 1000 closings.
* **Outles tilted (25°) down, longer service life** of fire hoses.
* **The main valve seal is conical, self-flushing** = dirt retention prevented = **longer service life**.
* **Very easy hydrant maintenance**:
  - **Replacing the main** valve seal (3); **without digging up the ground and without dismantling the body (4).**
  - **The threaded part of the closure (3.1)** is outside the flow of water, **permanently lubricated**, **maintenance-free** throughout it`s working life.
  - **Possibility (7) of checking the correctness of the drain and main valve.**
  - **Repair of the drainage valve (10.1)**; **from the outside**, partial excavation, **without dismantling the hydrant**.
* **Long warranty period (5 years).**
* **Probably the best, and the most economical hydrant available.**

Documents accompanying the delivery of hydrant:

* Declaration of Performance,
* Instruction for safety work (installation, handling, inspection, maintenance, warranty)

Flow of hydrant:



$Q = K_v \times (1000\Delta p / \rho)^{1/2}$
- flow..... Q [m³/h]
- flow coefficient..... K_v [m³/h]
- pressure difference..... Δp [bar]
- water density..... ρ [kg/m³]
